Profile

AI engineer with over four years of experience shipping AI systems to production. As CTO at Doctor911 I stay hands-on: I build agents, retrieval systems, and MCP servers, and set how we evaluate and monitor them. My portfolio runs a live agent with public evals, and my paper on LLM data augmentation was accepted at IEEE LACCI 2026.

Experience

Doctor911 · Chilean healthtech: telemedicine, at-home care, and lab exams
Chief Technology Officer (CTO)

Mar 2025 – Present
Jan 2026 – Present

- The AI products I built contributed to 10× web traffic growth and company profitability.
- Built RAG search on Vertex AI that respects each user's permissions.
- Built pre-production evals with golden datasets for RAG and agents (recall@k, faithfulness, agent runtime) to test every model or flow change before release.
- Built an MCP server that connects agents to RAG and internal tools, and unifies GPT, Claude, and Gemini.
- Built a Gemini Live voice agent that recommends, supports, and guides users through products on a single screen.
- Built a lab-results reader with Cloud Vision OCR that, when values fall outside normal ranges, points patients to the right specialist and consultation.
- Lead two engineers and a UX/UI designer, and set the standards for observability and CI/CD.

AI Engineer

Mar 2025 – Jan 2026

- Built the conversational AI platform with LangGraph and FastAPI: four WhatsApp agents (onboarding, sales, support, and fulfillment) and two web agents with over 19,000 messages handled and a ~100 ms semantic intent router.
- Integrated Meta Flows, catalogs, and Transbank payments; combined agents with business rules and medical review.
- Built hybrid catalog search for the web agents (embeddings and BM25 fused with RRF), plus XGBoost and RAG exam recommenders shared as tools across every agent.
- Deployed on GCP Cloud Run with production monitoring, personal-data protection, and prompt-injection mitigation.

WiseConn Latam · Irrigation technology for growers in Latin America and the US
Data Science Intern

Sep 2024 – Mar 2025

- Deployed CNN irrigation forecasting models and solar installation classifiers on SageMaker and S3.
- Led a cross-department data governance initiative that consolidated company data into shared pipelines.

Unitti · Cloud operations and cybersecurity services across Latin America
Jr AI Engineer

Jul 2022 – Jul 2024

- Automated reconciliation of about 800 invoices a month with a multimodal model and deterministic rules: 85% with no manual intervention, monthly close from 8 days to 3, and about 110 hours freed each month.
- Built a natural-language-to-SQL app that let non-technical staff query the database directly.
- Developed Python APIs over PostgreSQL with automated tests.

Client projects

MiAutoCheck: Used-vehicle valuation. A vision agent grades the photos, five agents research the market in parallel, and a supervisor writes the PDF report. A 30–60 minute appraisal became a 3-minute API call; about 90% of reports were approved without material changes on a validation set.

EPE: AI features for workplace well-being, with crisis detection and personal-data redaction. Versioned prompts with A/B tests, LLM-as-judge with drift monitoring, and Langfuse.

Education and publications

Master of Science in Data Science · U. Adolfo Ibáñez · Thesis with Maximum Distinction
Software Engineering and Industrial Engineering (double degree) · U. Adolfo Ibáñez

Paper: *Geometric Filtering of LLM-Generated Samples for Few-Shot Text Classification*, accepted at IEEE LACCI 2026.

Tools and languages

Agents and retrieval: LangGraph, LangChain, MCP, RAG, hybrid search, Vertex AI Search, pgvector.

Evals and observability: golden datasets, recall@k, faithfulness, LLM-as-judge, prompt A/B tests, Langfuse.

Models: OpenAI, Anthropic, Gemini (incl. Live), PyTorch, XGBoost.

Development and cloud: Python, TypeScript, SQL, FastAPI, Next.js, PostgreSQL, Docker, CI/CD, GCP, AWS, Azure.

Languages: Spanish (native), English (advanced), German (basic).
